

## Medfusion Plus Overview

# A Panoramic View of Your Patients' Healthcare

With multiple doctors and portal accounts, patients have never had a way to see all their healthcare information in one place. Not anymore!

Medfusion Plus is a downloadable mobile app, or browser app experience, that offers patients one place to see all upcoming appointments, prescribed medications, lab results and more -- gathered from ALL their patient portals -- for themselves and all family members.

### What Patients are saying:

"I love that everything is in one place."

"You've done what other can't figure out. Very impressive."

"This is exactly what I have been looking for in relation to managing my family's healthcare."

### All portals, all data, and an MU2 bonus!

Integrated with over 20 of the key EMR systems used in the U.S., Medfusion Plus pulls CCD information daily from a patient's portal accounts to populate one comprehensive view of care. That means daily CCDs downloads contributing to your MU2 metrics!

### Secure data sharing coming soon!

Soon, patients will be able to securely email to you a PDF document of their Medfusion Plus multi-provider personal health record information. Imagine -- one doc with all your patients' care information from *all* their providers, that you can instantly attach to their chart.

Medfusion Plus can be downloaded free from Apple Store or Google Play.
