

# The new and improved Patient Portal: Now available...en Español

The **Medfusion Patient Portal** is redesigned to drive higher adoption with a simple, clean interface and improved functionality. *And now it is available in Spanish!*

**New appointment request interface offers location and mapping options**

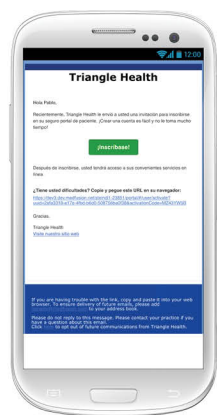

**Easy to understand function icons**

**Live chat help in Spanish from any portal page will be available starting in December, 2015**  
(For customers who subscribe to Patient Chat service)

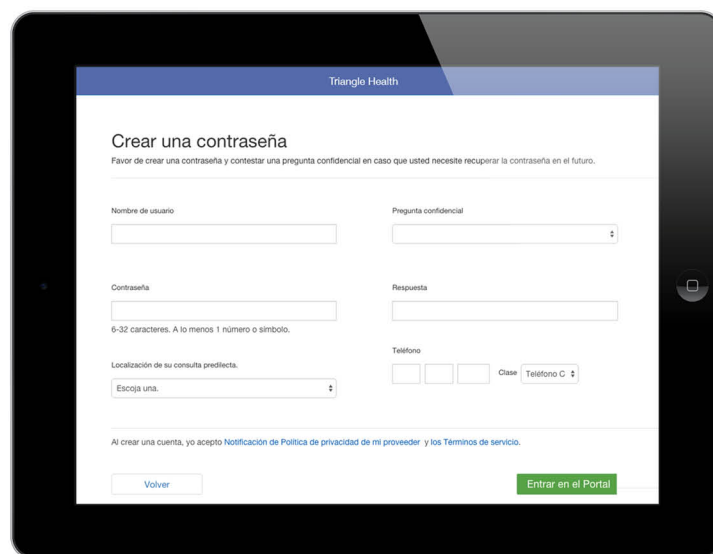

**This new version** of the Medfusion Patient Portal is a win for everyone!

- Updated with simple icons that make navigation a snap
- Preferred language is remembered from session to session, device to device
- All automatic messages and functionality are translated
- Spanish translation was done by a certified translator
- Message content to and from patients remains untranslated for your staff to handle

If your PM/EMR system supports sending preferred language, then portal invitations, confirmations and the portal itself automatically appear in that language.

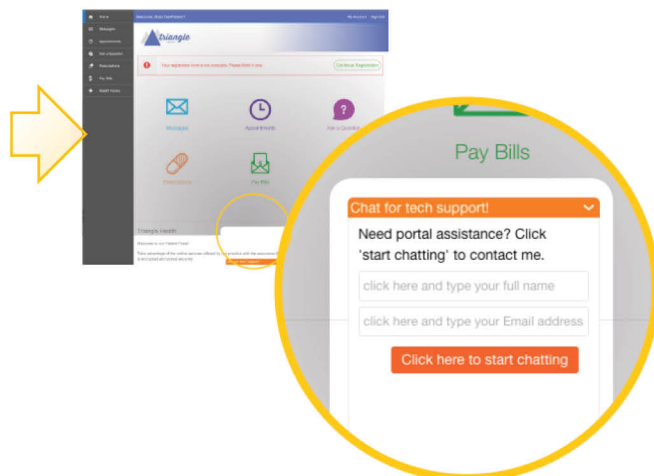

Portal invitations and other automated messages are provided in Spanish. When patients activate their accounts, the portal is pre-set to Spanish.

**The Patient Portal** user interface now scales seamlessly to fit any size device from a PC screen to mobile phone. So no matter where your patients are, or what device they're using, your portal will offer a consistently great experience.

### Patient Questions?

Let us handle your patients' portal technical questions with our Patient Chat service. Spanish language chat help will be available starting in December, 2015!

### Staff Questions?
